Office Action Summary

Application No.

09/778,874

Applicant(s)

IHAMA, MIKIO

Examiner

Amanda C Walke

Art Unit

1752

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ____ MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 December 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-18 and 21 is/are rejected.
- 7) ☒ Claim(s) 19 and 20 is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- 1) ☒ Certified copies of the priority documents have been received.
 - 2) ☐ Certified copies of the priority documents have been received in Application No. ____.
 - 3) ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 7/8/2003.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: ____.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brust et al (6,100,019) in view of Nisikawa et al (6,007,977).

Brust et al disclose a silver halide photographic material comprising high bromide {111} tabular grains having a high chloride epitaxy. The grains are preferably silver iodochlorobromide and contain silver iodide in an amount of less than 10 mole %, and silver chloride in an amount of less than 10 % as well (column 3, line 53 to column 4, line 35). It would have been obvious to one of ordinary skill in the art to prepare the emulsion using any amount within these ranges. Additionally, the inventive grains comprise either 0.75 mol % or 1.2 mol % iodide. The epitaxial deposits may constitute only 0.1 % of the total silver, thus the chloride may be added in an amount as low as 0.1 mol %. The grains account for at least 90 %, most preferably greater than 97 % of the total grain projected area, have a thickness of less than 0.2 microns, preferably less than 0.07 microns, an ECD of less than 6 microns, and an aspect ratio of at least 5 (column 5, lines 30-57). The grains may be hexagonal (column 7, lines 34-50). The grains contain high chloride epitaxies in the corners of the grains. The examples prepare grains having 6 epitaxial deposits, one in each corner of the grain, which implies that the grains formed by the examples are hexagonal grains. The pBr during emulsion preparation is preferably adjusted to be between

Art Unit: 1752

3.0 and 3.8, after the temperature has been set between 20 and 60 degrees C, and from looking at the inventive examples the temperature is preferably 40 degrees C (column 6, lines 45-67). The exemplified grains also contain one or more dislocation lines at the epitaxial junctions, demonstrating that the grains may have dislocation lines at the apexes of the grains. The material comprising the emulsion is coated on a support (column 10, lines 15-18).

Although the material does not specifically refer to the COV of the ECD of the grains, since the reference teaches that the emulsion should be monodisperse, that the COV would inherently be very low and would be less than less than the 30% and 20 % claimed given that it is most preferable for greater than 97 % of the emulsion to be comprised of the preferred grains which would have an ECD within the claimed range. The reference fails to disclose specific information on the edge lengths of the hexagonal grains.

Nishikawa et al disclose a silver chloriodobromide {111} emulsion comprising hexagonal grains containing dislocation lines in the apexes of the grains (column 4, lines 1-46). The reference teaches that it is preferable for hexagonal grains to have a ratio of the longest side to the shortest side of 2 or less (column 3, lines 11-26), and further teaches that a monodisperse emulsion will have a low COV of the ECD (15.5 or less) of the grains.

It would have been obvious to one of ordinary skill in the art to prepare the monodisperse high bromide {111} hexagonal grain emulsion of Brust et al using hexagonal grains having a ratio of the longest side to the shortest side of 2 or less given that it is taught to be preferable by Maruyama et al with reasonable expectation of achieving an emulsion having high sensitivity and graininess.

Allowable Subject Matter

3. Claims 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record fails to teach or suggest to one of ordinary skill in the art to prepare the material of the present claim 1 or 2 wherein the pBr of the emulsion is at 40 °C is not more than 3.5.

Response to Arguments

4. Applicant's arguments and declaration filed 12/3/2003 have been fully considered but they are not persuasive.

Applicant has argued that the examiner misinterpreted the declaration evidence with respect to the iodide content, and that the iodide content of the grains of the instant invention is 4.39 mol % instead of 15 mol %. The examiner's argument was based upon the difference in the iodide contents of the reference example C (the closest prior art) versus that of the inventive samples. Thus, regardless of the misinterpretation of the percentage of iodide in the inventive grains, the inventive grains still contain a much higher percentage of iodide than that of the closest prior art (example C of Brust contains 0.75 mol % iodide). Thus, as stated in the examiner's previous response, it is well known in the art that the addition of iodide ions to the grain population, the result is increased photographic sensitivity, and this is taught in Research Disclosure 39121 on page 717.

Additionally, applicant has argued that the Brust reference teaches in column 3 that an aim of the invention of the reference is to increase the imaging sensitivity of an emulsion by the

Art Unit: 1752

addition of epitaxies, thus it appears that what the applicant is claiming as unexpected results, is actually what the prior art of record teaches one of ordinary skill in the art to expect. The reference further teaches that it is preferred that grains have epitaxies (specifically edge/corner epitaxies) to increase the sensitivity of an emulsion rather than increasing the iodide which causes an undesirable decrease in the rate of development (column 3, line 33 to column 4, line 4 and column 8, lines 46-48), again teaching one of ordinary skill in the art to expect an increase in sensitivity when corner epitaxies are deposited on the grains. Therefore, the arguments and the declaration evidence filed are not persuasive and the examiner maintains her position.

Conclusion

1. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

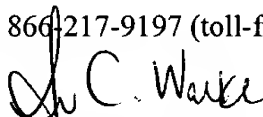

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amanda C Walke whose telephone number is 571-272-1337. The examiner can normally be reached on M-R 5:30-4.

Art Unit: 1752

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
